

DIY is a big N-O when it comes to SASE

SASE (Secure Access Service Edge) promises to deliver consistent security and enhance the user experience no matter the device or the users' location. It does this by converging networking and network security functions and shifts them toward an as-a-service (aaS) cloud edge model.

Is SASE too good to be true?

There is one major hurdle when it comes to fully achieving all the benefits SASE has to offer: a reliable convergence of products.

A complete SASE solution incorporates individual technologies that aren't quite fully integrated:

- ✓ SD-WAN networking
- ✓ Security stack of technologies, including firewall, SWG, CASB, and ZTNA
- ✓ As-a-service cloud edge model

With so many disparate pieces, do-it-yourself (DIY) SASE could turn out to be a nightmare when working with a variety of vendors.

i-Virtualize and Cisco get SASE

Together, i-Virtualize and Cisco have already converged everything you need (even IoT) onto one platform to ensure your SASE success.

Challenge	Cisco SASE
Managing evolving SASE expectations	Proven integrated solution that delivers as promised.
Integrates with existing infrastructure	Integrates easily into your existing infrastructure—or i-Virtualize will help you find a better alternative.
Meet regulatory compliance needs	Ensures you are in, and stay in, compliance to meet regulatory standards.
Getting buy-in and support	i-Virtualize and Cisco work with you to develop a roadmap for success.
Missing pieces with multiple vendors	Get everything you need with one solution provider—i-Virtualize—and in one solution—Cisco.
Compromising on consolidation	Effective SASE solution that is truly consolidated, without having to compromise.

A SASE Powerhouse

i-Virtualize and Cisco take the complexity out of every step of your SASE journey with open APIs for seamless integration across Cisco technologies and third-party systems.

Deliver support so you get more out of your investment

Provide consultation to help you map out your SASE journey

Deliver hassle-free and cost-effective solutions for your business

Reduce SASE complexity to extend your SASE lifecycle

DIY doesn't work

It may seem simpler to do it yourself, but taking a variety of solutions, from a variety of vendors, and trying to mold them into a SASE architecture that not only delivers, but also pays off, is another thing.

Schedule a consultation to learn more about how i-Virtualize and Cisco can put all the SASE pieces together to fit your business.
